TIPS FOR HYDROPONIC / RECIRCULATING

FEEDING SCHEDULES ARE GUIDES; DIFFERENT STRAINS, ATMOSPHERIC CONDITIONS, AND GROWING STYLES CAN EFFECT NUTRIENT UPTAKE

- ** Recirculating or oxygenated grow systems may require a reduction or elimination of sugar flush from feeding regiment (you may foliar spray instead, see bottle for instructions)
- Fill reservoir with water, add Nutes in the order on feeding schedule.
- Make any desired PH adjustment prior to adding Nutes (PH between 5.5-6.5)
- Rinse measuring device after each use some products may react to each other.
- All base nutrients and additives are interchangeable with your current nutrient line.

- Change your reservoir water every 7-10 days.
- Tap and well water is typically 100-200ppm account for this when targeting ppm on feeding schedule.
- Veg Builder and Veg Node Stretcher may be interchanged to personalize your plants size and structure.
- Refer to GENERAL FEEDING SCHEDULE TIPS for additional information.
